Subject: Re: Resolution of risk assessment comment

Jim

This is to follow-up on our conversation earlier today and confirm our understanding with regards to resolution of comment #10: evaluation of near bottom surface water sample results.

- The LWG will screen all surface water sample results (including the near bottom samples) against non-zero MCLGS, MCLs and RSLs in the risk assessment, and the results will be included in the uncertainty section

- Sample results that exceed screening levels will be carried into the FS for consideration as part of the contaminant mobility evaluation

- The ARARs evaluation and evaluation of the surface water drinking water pathway will be based on depth-integrated samples in accordance with our previous direction

Please let us know if you have any questions.

thanks
Chip

Thank you for getting back to us with EPA's clarification on your request for surface water screening in the FS. Bob and I passed this on to the LWG Exec, and I'll be calling you soon to discuss our proposed

path forward. Thanks, Jim.
